

# Engineering Calculation Report: Problem 2-2

Generated: 2025-12-09

## Problem Setup

Vector	$ \vec{F} $ (N)	$\theta$ (deg)	Ref
$\vec{F}_2$	700.0	15.0	$-x$
$\vec{F}_R$	500.0	0.0	$+y$
$\vec{F}_1$	?	?	$+x$

## Equations Used

$$(1) |\vec{F}_1|^2 = |\vec{F}_2|^2 + |\vec{F}_R|^2 - 2 \cdot |\vec{F}_2| \cdot |\vec{F}_R| \cdot \cos(\angle(\vec{F}_2, \vec{F}_R))$$

$$(2) \frac{\sin(\angle(\vec{F}_1, \vec{F}_R))}{|\vec{F}_2|} = \frac{\sin(\angle(\vec{F}_1, \vec{F}_2))}{|\vec{F}_1|}$$

## Solution

**Step 1:**  $\angle(\vec{F}_2, \vec{F}_R)$

$$\angle(\vec{F}_2, \vec{F}_R) = |\angle(+x, \vec{F}_2) - \angle(+x, \vec{F}_R)| = |195^\circ - 90^\circ| = 105^\circ$$

**Step 2:**  $|\vec{F}_1|$  using Eq 1

$$|\vec{F}_1| = \sqrt{(700.0 \text{ N})^2 + (500.0 \text{ N})^2 - 2(700.0 \text{ N})(500.0 \text{ N})\cos(105.0^\circ)} = 959.8 \text{ N}$$

**Step 3:**  $\angle(\vec{F}_1, \vec{F}_R)$  using Eq 2

$$\angle(\vec{F}_1, \vec{F}_R) = \sin^{-1}(700.0 \text{ N} \cdot \frac{\sin(105.0^\circ)}{959.8 \text{ N}}) = 44.8^\circ$$

**Step 4:**  $\angle(\vec{x}, \vec{F}_1)$  with respect to  $+x$

$$\angle(\vec{x}, \vec{F}_1) = \angle(\vec{x}, \vec{F}_R) - \angle(\vec{F}_1, \vec{F}_R) = 90.0^\circ - 44.8^\circ = 45.2^\circ$$

## Results

Vector	$ \vec{F} $ (N)	$\theta$ (deg)	Ref
$\vec{F}_1$	959.8	45.2	$+x$
